REC_2028_OOPS using Java_Week 4_CY

Attempt : 1
Total Mark : 40
Marks Obtained : 30

Section 1 : Coding

1. Problem Statement

A library wants to analyze book titles to count the number of words that start with an uppercase letter. This helps the library track proper nouns and important words in titles.

Your task is to write a program that, for each given title, counts and prints the number of words that start with an uppercase letter.

Input Format

The first line contains an integer T, representing the number of book titles.

Each of the next T lines contains a single title (string).

Output Format

For each title, the output print a single integer representing the number of words starting with an uppercase letter.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1

The Chronicles of Narnia

Output: 3

Answer

// You are using Java

```
import java.util.*;
```

```
class UppercaseWordCounter {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int T = sc.nextInt();
        sc.nextLine();

        for (int t = 0; t < T; t++) {
            String title = sc.nextLine();
            String[] words = title.split(" ");
            int count = 0;

            for (String word : words) {
                if (word.length() > 0 && Character.isUpperCase(word.charAt(0))) {
                    count++;
                }
            }
            System.out.println(count);
        }
        sc.close();
    }
}
```

Status : Correct

Marks : 10/10

2. Problem Statement

Neha is analyzing text messages to identify words that have repeated characters. A word is considered “repetitive” if any character appears more than once in that word.

Your task is to write a program that extracts all words that contain repeated characters from a given sentence.

If no such word exists, print "No repetitive words found".

Input Format

The input contains a single line containing a sentence with multiple words.

Output Format

The output prints all words that contain repeated characters separated by a space.

If no word contains repeated characters, print "No repetitive words found".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: letter balloon apple tree

Output: letter balloon apple tree

Answer

```
// You are using Java
import java.util.*;

class RepetitiveWordsFinder {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        String sentence = sc.nextLine();
        String[] words = sentence.split(" ");

        List<String> result = new ArrayList<>();
```

```

        for (String word : words) {
            if (hasRepeatedChars(word)) {
                result.add(word);
            }
        }

        if (result.isEmpty()) {
            System.out.println("No repetitive words found");
        } else {
            for (String w : result) {
                System.out.print(w + " ");
            }
        }

        sc.close();
    }

    private static boolean hasRepeatedChars(String word) {
        Set<Character> seen = new HashSet<>();
        for (char ch : word.toCharArray()) {
            if (seen.contains(ch)) {
                return true;
            }
            seen.add(ch);
        }
        return false;
    }
}

```

Status : Correct

Marks : 10/10

3. Problem Statement

A bookstore wants to analyze the titles of books to determine their longest word in each title. This helps in designing banners and covers.

Your task is to write a program that, given a sentence (book title), finds and prints the longest word. If multiple words have the same maximum length, print the first one.

Input Format

The input contains a single line containing a sentence representing the book title.

Output Format

The output prints a string representing the longest word in the sentence (book title).

Refer to the sample output for formatting specifications.

Sample Test Case

Input: The Chronicles of Narnia

Output: Chronicles

Answer

// You are using Java

```
import java.util.*;
```

```
class LongestWordInTitle {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        String title = sc.nextLine();
        String[] words = title.split(" ");

        String longestWord = "";
        for (String word : words) {
            if (word.length() > longestWord.length()) {
                longestWord = word;
            }
        }

        System.out.println(longestWord);
        sc.close();
    }
}
```

Status : Correct

Marks : 10/10

4. Problem Statement

Meera is practicing her English vocabulary. She wants to focus on words that have more vowels in them, as they help improve her pronunciation. She decides to extract only those words from a sentence that contain at least two vowels.

Your task is to help Meera by writing a program that finds such words from the given sentence.

Input Format

The input contains a string representing the sentence.

Output Format

The output prints all the words that contain at least two vowels, separated by a space.

If no such word exists, print "No words with two vowels".

Refer to the sample output for formatting specifications.

Sample Test Case

Input: This is an example sentence

Output: example sentence
